Why Do I Need the Accessibility Radar?

Change is an expected part of your online business. Unfortunately, along with those necessary changes comes the looming threat of an ADA non-compliance lawsuit. Whether you have taken steps to become accessible, your website may still be at risk.

ADA Non-Compliance Risk

If your website reveals more than five issues, one of the prolific ADA non-compliance lawsuit firms could identify you as their target.

- 4,050 website owners faced ADA digital accessibility lawsuits in 2021, (Pacer.gov)
- 21% of the cases filed were against companies that previously received a web accessibility lawsuit within the past year. (Pacer.gov)

Fortunately, there is a way to help protect your business from falling on the radar of this predatory practice, Accessibility Radar.

Accessibility Radar

Just as you would use a security system to protect your home, Accessibility Radar focuses on protecting your online business from falling prey to an ADA digital accessibility lawsuit.

- Accessibility Scans Against WCAG 2.1 and ADA Guidelines
- Email Compliance Alerts
- ADA Remediation Resources

ADA Digital Lawsuit by the Numbers

Accessibility Radar

Dashboard

Accessibility Radar is an automated recurring ADA web compliance auditing platform. Through our work in the trenches of the ADA web remediation space, we were able to reverse-engineer the process in which many of the prolific ADA non-compliance lawsuit firms identify their targets. We realized that the vast majority of cases are filed solely on the basis of the results of automated scanning tools, so we developed Accessibility Radar as a hands-off method of keeping you out of their crosshairs.

Key Features

Scans
Internal Audit, Wave,
and Lighthouse
